Composition of CSR Committee

Sl No.	Name	Designation	Status in Committee
1	Mr Jeethendra Singh Goud	Managing Director	Chairman and Member
2	Mr Sudhakar Reddy Pesaladinne	Independent Director	Member
3	Mr Gunjarla Ramu	Independent Director	Member

1. INTRODUCTION

Union Quality Plastics Limited is fully committed to contributing its share towards a better, sustainable and environmentally responsible India. The company operates in the plastics manufacturing sector with its operational presence in Hyderabad, Telangana. The company recognises its responsibility towards the environment and society and remains committed to operating responsibly and sustainably.

The commitments of Union Quality Plastics Limited towards corporate social responsibility include, but are not limited to, the promotion of environmental sustainability, plastic waste management and prevention of plastic leakage into natural ecosystems through responsible and sustainable operations. This CSR Policy is framed in accordance with Section 135 of the Companies Act, 2013 and the Companies (CSR Policy) Rules, 2014. The Company shall continue to act with integrity and accountability while undertaking CSR initiatives for the benefit of society and the environment.

2. OBJECTIVE AND SCOPE

2.1 OBJECTIVE

The main objective of the CSR Policy is to lay down guidelines for Union Quality Plastics Limited (hereinafter referred to as ‘the Company’) to make CSR one of the key focus areas to adhere to the Company's commitment in various activities that focus on making a positive contribution to society through effective impact and sustainable development programmes. These rules set the standards for the way we interact with society at large and the environment around us.

Contribute to sustainable development through environmental protection initiatives, plastic waste management and prevention of plastic pollution in natural ecosystems.

This policy covers the proposed CSR activities shall be undertaken by the company and ensures that they are in line with Schedule VII of the Companies Act, 2013, as amended from time to time. It shall cover the CSR activities which are being carried out in India only and includes a strategy that defines plans for future CSR activities. The CSR activities of the Company shall be carried out within the territory of India.

Provisions of Union Quality Plastics Limited CSR Policy will be revised or amended in accordance with the guidelines on the subject as may be issued by the government from time to time. Any changes in the legal provisions or government guidelines shall be deemed to be adopted as per applicability provisions issued from time to time.

2.2 SCOPE & COVERAGE

The CSR activities of the company shall include, but not be limited to, any or all of the sectors or activities as may be prescribed by Schedule VII of the Companies Act, 2013, amended from time to time. Further, the company will review the sectors or activities from time to time and make additions/deletions/clarifications to the above sectors/activities.

The CSR activities which are exclusively for the benefit of the employees of Union Quality Plastics Limited or their family members shall not be considered as CSR activities.

CSR expenditure shall include all expenditure, including contribution to corpus, for projects or programs relating to CSR activities approved by the Board but does not include any expenditure on any item not in conformity or not in line with activities which fall within the purview of Schedule VII of the Companies Act, 2013.

Union Quality Plastics Limited shall give preference to the local area or areas around it where it operates for carrying out the CSR activities, particularly in and around Hyderabad and neighbouring regions.

The Board of Union Quality Plastics Limited may decide to undertake its CSR activities either directly or through a registered trust or a registered society or a company established by it or its holding or subsidiary or associate company pursuant to Section 135 of the Companies Act, 2013, and rules made thereunder.

Choice of CSR & Sustainability schemes for implementation will preferably be made in consultation/association with the administrative authorities of the District/Sub-division/Blocks/Panchayats in which the Union Quality Plastics Limited's Units are operating. This will help to avoid overlapping of the works/initiatives being undertaken by these authorities so that the genuine requirements of the targeted segments of the society are addressed by the chosen schemes and also ensure availability of authentic baseline data or proper need assessment of identified schemes at the grassroots level.

Union Quality Plastics Limited can collaborate with other companies for undertaking CSR projects/programmes/CSR activities in such a manner that the CSR committees of the respective companies are in a position to report separately on such projects or programmes in accordance with the applicable CSR rules.

A brief summary of CSR & sustainability initiatives and achievements will also be included in the annual report of Union Quality Plastics Limited as per applicable provisions/rules/guidelines.

2.3 CSR BUDGET

In accordance with Section 135 of the Companies Act, 2013, Union Quality Plastics Limited is required to spend at least two percent (2%) of the average net profits made during the three immediately preceding financial years on Corporate Social Responsibility (CSR) activities.

The CSR obligation of the Company has been calculated based on the net profits of the last three financial years as follows:

Financial Year	Net Profit (₹) (In Lakhs)
FY 2022–23	5,420,000
FY 2023–24	5,610,000
FY 2024–25	5,650,063
Average Net Profit	5,560,021
2% of Average Net Profit	₹111,200.42

Based on the above, the CSR obligation of the Company is calculated as:

Accordingly, the proposed **CSR budget for the financial year is approximately ₹115,000**, allowing for effective implementation and monitoring of CSR initiatives. The CSR Committee shall recommend the allocation of the budget among approved CSR projects, subject to the approval of the Board of Directors.

3. CORPORATE SOCIAL RESPONSIBILITY (CSR) COMMITTEE

3.1. CONSTITUTION

The Corporate Social Responsibility (CSR) Committee of Union Quality Plastics Limited is constituted in accordance with Section 135 of the Companies Act, 2013.

The CSR Committee is constituted by the Board of Directors of the Company. The committee comprises the following members appointed by the board:

Mr Jeethendra Singh Goud – Chairman, CSR Committee

Mr Sudhakar Reddy Pesaladinne – Independent Director, Member

Mr Gunjarla Ramu – Independent Director, Member

The Committee shall oversee the CSR activities of the Company and ensure compliance with applicable provisions of the Companies Act, 2013, and CSR Rules.

3.2. FUNCTIONS AND POWERS OF COMMITTEE

To effectively implement the objectives of the Company with respect to CSR, the Committee is vested with the following functions and powers:

1. Formulate a CSR policy and recommend the same to the Board of Directors of the company for approval.
2. Recommend CSR projects/programs/activities as stated under Schedule VII of the Act
3. Approve to undertake CSR activities, if necessary, in collaboration with group companies/other companies/firms/NGOs or implementing agencies, etc., and to separately report the same in line with the CSR rules.
4. Recommend the CSR budget.
5. The Committee does NOT spend CSR money. The Board authorizes spending based on committee recommendation.
6. Create a transparent monitoring mechanism for the implementation of CSR initiatives in India.
7. Submit the reports to the board in respect of the CSR activities undertaken by the company.
8. Monitor the CSR policy from time to time.
9. Monitor the activities/charter of the Internal Working and Monitoring Group (WG), who are authorised to ensure that the CSR activities of the company are implemented effectively.

10. Authorize executives of the Company to attend the CSR Committee Meetings, if necessary
11. Formulate and recommend to the Board an Annual Action Plan in pursuance of its CSR policy, which shall include the items as mentioned in rule 5(2) of the Companies (CSR Policy) Rules, 2014.

3.3 Role of the Board

- The board shall approve the CSR policy of Union Quality Plastics Limited after taking into consideration recommendations put forward by the CSR Committee.
- The board shall also ensure that the CSR activities identified through this Corporate Social Responsibility Policy are carried out by the company according to the plan.
- The Board could choose to perform CSR activities – authorised by the CSR Committee – directly or indirectly through a registered trust, registered society or a company described as a Section 8 company, as it is permitted by the Companies Act, 2013, or it could be performed in conjunction with its holding, subsidiary or associate companies or in conjunction with any other eligible entity, as it is permitted under the Companies Act, 2013.
- It will be mandatory that under Section 135 of the Companies Act, 2013, the reason for any underspending of the prescribed amount of CSR will be specified by the Board in its Board Report of the concerned financial year.

3.4 GUIDING PRINCIPLES FOR PROJECT SELECTION AND IMPLEMENTATION

To make the implementation effective, the company will further subdivide its long-term CSR plans into short-term action plans and medium-term action plans.

The specifics of every plan suggested by the CSR Committee and accepted by the Board will explicitly state:

- Activities of the CSR that will be done in the financial year.
- The amount of funds needed in each activity or project.
- Authorities, partners, or the internal teams that will be engaged in the execution with regard to the roles and responsibilities.
- The quantifiable results, anticipated social effect, and environment-related advantages of the CSR programme.

- CSR projects shall be selected based on need assessment and stakeholder consultation.

The company is well aware that some of the CSR long-term projects can take a number of years to become significant. As such long-duration initiatives are planned, therefore, the Board shall:

- Calculate the overall cost of every long-term project.
- Engage in the required expenditure on CSR throughout the project.
- Make sure that the support given is continued until the project has created the intended impact.

These values will help guide the CSR activities presented by Union Quality Plastics Limited to be planned, sustainable, aligned with the needs of the community, and able to produce quantifiable and long-term benefits.

4. CSR EXPENDITURE

The Company (Union Quality Plastics Limited) will ensure that in every financial year it spends at least 2% of the average net profits of the Company made during the three immediately preceding financial years, towards Corporate Social Responsibility activities as enumerated in this Policy.

Net profit for the purpose of allocation towards CSR means profit as defined under Rule 2(f) of the Companies (Corporate Social Responsibility Policy) Rules, 2014. The CSR expenditure shall include all expenditure including contributions to corpus, or on projects or programmes relating to CSR activities approved by the Board of Directors on the recommendation of its CSR Committee but does not include any expenditure on an item not in conformity or not in line with activities stated under Schedule VII of the Companies Act, 2013.

The Company will give preference to the local area or areas around its operations for carrying out CSR activities. The Board may decide to undertake CSR activities either directly or through an implementing Agency in accordance with the provisions of Section 135 of the Companies Act, 2013 and the CSR Rules.

The Company will build CSR capacities of its own personnel as well as those of its Implementing Agencies through institutions with established track records; however, such expenditure, including administrative overheads for general management and administration of CSR functions, shall not exceed five percent of total CSR expenditure of the Company in

one financial year. Administrative overheads shall not include expenses directly incurred for the designing, implementation, monitoring and evaluation of a particular CSR project or programme.

The CSR amount may be spent for creation or acquisition of a capital asset, which shall be held by:

- A. A company established under section 8 of the Act, or a registered public trust or registered society, having charitable objects and CSR registration number;
- B. beneficiaries of the said CSR project (for example in the form of self-help groups, collectives, entities); or
- C. a public authority.

4.1 Implementation

Union Quality Plastics Limited shall undertake its CSR activities through an implementing agency in accordance with Section 135 of the Companies Act, 2013 and the Companies (Corporate Social Responsibility Policy) Rules, 2014, as amended from time to time. For the financial year under reporting, the Company has engaged United Way Hyderabad as the implementing partner for execution of CSR projects and programmes.

The implementing agency shall be registered under Section 12A and 80G of the Income Tax Act and shall possess a valid CSR Registration Number (CSR-1) as prescribed under the Companies (CSR Policy) Rules, 2014.

United Way Hyderabad is a not-for-profit organisation working in community development and environmental initiatives. The organisation has prior experience in implementing social projects and has the required systems for project execution and reporting. The selection has been made considering its experience, compliance requirements and presence in the local operational areas of the Company.

4.1.1 Scope of engagement

- CSR activities will be carried out in and around the Company's operational areas in Telangana, particularly in locations such as Pragathi Nagar, Kukatpally.
- The activities will mainly focus on environmental sustainability and plastic waste management related initiatives as approved by the CSR Committee from time to time.

- The expected beneficiaries will include local communities and residents in the project areas.

4.1.2 Roles & responsibilities

- **Company:** The Company shall approve CSR projects and budgets and provide overall supervision through the CSR Committee. The Company shall also ensure compliance with statutory requirements and reporting under the Companies Act, 2013.
- **Implementing Partner:** The implementing partner shall carry out the approved CSR activities and maintain proper records of implementation. Periodic progress reports and financial statements shall be submitted to the Company.

4.1.3 Monitoring & reporting

The implementing partner shall submit periodic progress reports and utilisation details to the Company. The CSR Committee or authorised representatives of the Company may review the implementation progress and conduct visits to project locations wherever required.

4.1.4 Financial management & compliance

CSR funds shall be released as per approved budgets and project requirements. The implementing partner shall maintain proper accounts and provide utilisation certificates and supporting documents for audit and statutory purposes.

4.1.5 Review

The engagement with the implementing partner shall be reviewed periodically based on project performance and compliance. Continuation of the engagement shall be subject to approval by the CSR Committee and the Board of Directors.

5. CSR ACTIVITIES TO BE UNDERTAKEN BY THE COMPANY

In accordance with Schedule VII of the Companies Act, 2013 and the Companies (CSR Policy) Rules, 2014, Union Quality Plastics Limited shall undertake Corporate Social Responsibility (CSR) activities in the areas of environmental sustainability, waste management, sanitation, community awareness and sustainable development in the local areas of its operations. The CSR activities shall be undertaken either directly by the Company or through eligible implementing agencies in accordance with Section 135 of the Companies Act, 2013. Preference

shall be given to communities located in and around the Company's operational areas in Hyderabad and neighbouring regions.

The Company shall focus on the following CSR activity areas:

a) Environmental Sustainability

Ensuring environmental sustainability, ecological balance and prevention of plastic pollution through plastic waste collection, recycling initiatives and protection of natural ecosystems.

b) Waste Management and Sanitation

Promotion of scientific waste management practices including segregation of waste, plastic recovery and support to local sanitation initiatives.

c) Water Body Protection

Activities relating to protection of lakes, drains and water bodies by preventing entry of plastic waste and improving local environmental conditions.

d) Community Awareness and Capacity Building

Conducting awareness programmes, workshops and educational campaigns regarding plastic waste management, recycling practices and environmental protection.

e) Community Participation and Volunteerism

Encouraging community participation, volunteer engagement and collaboration with local authorities and community groups for sustainable environmental practices.

CSR activities shall not include activities undertaken in the normal course of business of the Company, activities that exclusively benefit employees of the Company and their families, or activities undertaken outside India, except as permitted under the Companies Act, 2013 and the Companies (CSR Policy) Rules, 2014.

5.1 PROJECTS OR PROGRAMS

In accordance with Schedule VII of the Companies Act, 2013, Union Quality Plastics Limited proposes to implement a **“Plastic Leakage Prevention & Recycling Initiative”** as a pilot CSR project.

The proposed CSR project shall be implemented as a **pilot initiative** with an approved CSR budget of approximately **₹1,15,000**.

Plastic Leakage Prevention & Recycling Initiative

The project aims to prevent post-consumer plastic waste from entering natural water bodies by installing a floating plastic interception barrier (floating boom) at selected stormwater drain entry points of identified lakes. Urban lakes in Hyderabad primarily receive floating plastic waste through stormwater nalas, and interception at these entry points is an effective and cost-efficient solution.

Under this initiative, the Company shall select one major stormwater drain inlet carrying a significant quantity of floating waste and install a pilot floating barrier at the lake entry point. The barrier shall be designed in a U or V shape to allow water flow while collecting floating plastic waste such as bottles, carry bags, thermocol and other debris. The lake which is in consideration for this initiative is Amber Lake.

Amber Lake, Hyderabad is classified as an urban stormwater lake receiving runoff from residential catchments including Bachupally, Miyapur and Pragathi Nagar. The lake has approximately 9–12 drainage inlets, of which four critical drains have been selected for intervention, comprising two major nalas and two medium drains. The floating interception system will be installed at the stormwater drain entry points where water enters the lake. Each intervention will cover an average barrier length of 8–12 meters per drain, with a net depth of approximately 1.2 meters below the water surface.

The floating barrier shall be fabricated using recycled HDPE material, including plastic waste generated from the Company's own operations, thereby promoting a circular economy approach. The project shall be implemented in partnership with **United Way Hyderabad** as the implementing NGO, with coordination and necessary permissions from the **Greater Hyderabad Municipal Corporation (GHMC)** and the **Hyderabad Metropolitan Water Supply & Sewerage Board (HMWSSB)**.

Estimated Plastic Requirement

- **Plastic type:** Recycled HDPE (High-Density Polyethylene)
- **Plastic used for:** Floating elements and structural buoyancy
- **Plastic required per drain:** ~90–120 kg
- **Total plastic required for 4 drains:** ~360–480 kg

Sl. No.	Category	Item Description	Amount (₹)
1	Materials & Fabrication	Recycled HDPE float fabrication	15,000
2	Materials & Fabrication	MS support frames (2 major drains)	8,000
3	Materials & Fabrication	UV stabilized nylon net curtain	9,500
4	Materials & Fabrication	GI chain weights & anchors	6,000
5	Materials & Fabrication	Ropes, clamps & connectors	4,500
6	Materials & Fabrication	Concrete anchor blocks & fixing	3,500
7	Materials & Fabrication	Installation hardware & fasteners	2,500
8	Materials & Fabrication	Anti-corrosion coating	2,000
9	Installation & Labour	Fabricators (2 workers × 3 days)	7,200
10	Installation & Labour	Helpers (2 workers × 3 days)	5,400
11	Installation & Labour	Site supervisor / technician	4,200
12	Installation & Labour	Boat usage & operator	3,800
13	Installation & Labour	Loading & unloading labour	2,000
14	Installation & Labour	Safety equipment & PPE	2,400
15	Operations & Maintenance	Periodic cleaning labour	8,500
16	Operations & Maintenance	Emergency monsoon cleaning	2,500
17	Operations & Maintenance	Net repair & patching	2,500
18	Operations & Maintenance	Waste collection tools & bags	1,500
19	Operations & Maintenance	Transportation & fuel	5,000
20	NGO & Compliance	Implementation partner coordination fee	10,000
21	NGO & Compliance	Government liaison & permissions	3,000
22	NGO & Compliance	Community awareness activity	3,000

23	NGO & Compliance	Documentation & reporting	2,500
24	NGO & Compliance	Impact monitoring & data recording	500

Key Project Components

- Fabrication and installation of floating plastic interception barrier
- Anchoring and net collection system at selected drain inlet
- Periodic collection, segregation and recycling of trapped plastic waste
- Installation of awareness signage at the site highlighting the CSR initiative
- Community awareness and volunteer engagement activities

Budget and Monitoring

The project shall be implemented as a pilot initiative with an estimated CSR expenditure within the approved CSR budget of the Company. The project shall be monitored by the CSR Committee through periodic progress reports, site inspections and review of utilisation certificates submitted by the implementing agency. This initiative shall not be positioned as a lake cleaning or restoration project, but as a preventive environmental intervention focused on plastic waste interception, recycling, and sustainability.

Expected Outcomes and Impact

Upon completion of the pilot phase, the Company expects the following outcomes from the project:

- Prevention of approximately 900-1,200 kilograms of plastic waste annually from entering the identified lake.
- Visible reduction of floating plastic waste accumulation at the selected drain entry points.
- Improvement in local environmental cleanliness and aesthetics in and around the intervention area.
- Enhanced awareness among nearby residents regarding waste segregation, recycling and responsible disposal of plastic.
- Protection of aquatic life, birds and surrounding ecosystems from plastic pollution.

- Indirect environmental and community benefit to approximately 10,000 residents residing in surrounding localities such as Pragathi Nagar, Kukatpally.
- Establishment of a replicable model for similar interventions in other water bodies in the Hyderabad region.

Efficiency

The CSR project efficiency was evaluated using a qualitative weighted scoring method because no financial or beneficiary data was available to apply cost-benefit analysis. Five parameters aligned with the project objectives were assessed.

Category	Percentage	Score Given
Environmental Impact	30%	26
Community Awareness	25%	22
Implementation & Monitoring	20%	17
Sustainability	15%	12
and Compliance & Reporting	10%	9

Formula: Project Efficiency (%) = (Total Score Obtained ÷ Maximum Possible Score) × 100

Substitution = $(86 \div 100) \times 100$ Project Efficiency = **86%**

Indicating a highly effective initiative that achieves environmental improvement with long-term impact and proper compliance.

6. PUBLICATION / INFORMATION DISSEMINATION OF CSR POLICY

Disclosure of the composition of the CSR Committee, CSR & Sustainability Policy, Projects approved by the Board and initiatives undertaken by Union Quality Plastic Limited will be posted on company's website and be included in the Directors' Report in line with the existing practices and guidelines of Government of India and as amended from time to time.

7. MONITORING MECHANISM

The Company shall institute a transparent monitoring mechanism for implementation of its CSR projects in accordance with the provisions of the Companies Act, 2013 and the Companies (Corporate Social Responsibility Policy) Rules, 2014.

An Internal Working and Monitoring Team comprising of designated employees of the Company may be set up to ensure effective implementation and monitoring of the projects

approved by the CSR Committee from time to time. The decisions of Corporate Social Responsibility Committee are ratified by the Board of Directors

from time to time. The implementing agency shall submit periodic progress reports, financial statements and utilisation certificates to the Company. The CSR Committee shall review such reports and place its observations before the Board of Directors.

The Board of Directors shall satisfy itself that the CSR projects are implemented in accordance with the approved CSR Policy and Annual Action Plan.

7.1 REPORTING BY INTERNAL WORKING AND MONITORING TEAM

The Internal Working and Monitoring Team so constituted, will report / give feedback to the CSR Committee for all CSR projects undertaken. The Internal Working and Monitoring Team shall submit reports to the CSR Committee of the Company at least once in six months on the progress of the various projects approved by the Committee and entrusted to the Group for implementation and monitoring.

8. IMPACT ASSESSMENT AND CSR REPORTING

The Company shall assess the impact of its CSR initiatives in accordance with the provisions of Rule 8(3) of the Companies (Corporate Social Responsibility Policy) Rules, 2014, as amended from time to time, wherever applicable.

For CSR projects meeting the prescribed financial thresholds under the Rules, the Company may undertake impact assessment through an independent external agency. The impact assessment shall evaluate the effectiveness of the CSR project in terms of social and environmental benefits achieved against the planned objectives and measurable indicators.

The findings of the impact assessment, if conducted, shall be placed before the CSR Committee and the Board of Directors and shall form part of the Annual CSR Report of the Company.

The Company shall prepare an annual report on CSR containing the prescribed particulars relating to CSR activities, amount spent, progress of ongoing projects and reasons for any unspent amount. The report shall be annexed to the Board's Report and included in the

Company's Annual Report in accordance with the Companies Act, 2013 and the Companies (Corporate Social Responsibility Policy) Rules, 2014.

The Company shall also utilise the learning from impact assessment and project monitoring to improve planning, design and implementation of future CSR initiatives.

10. STRATEGIC CSR EVALUATION & SUSTAINABILITY ANALYSIS

10.1 Introduction to Strategic CSR Evaluation

The report's previous sections present details about the Plastic Leakage Prevention and Recycling Initiative design and its budgeting and execution process however the initiative needs evaluation through its actual impact on the world. CSR practice requires organizations to assess their project effectiveness based on both implementation success and the project's ability to create meaningful sustainable outcomes which match both organizational and societal needs.

The sustainability evaluation of the initiative requires assessment through its compliance with sustainability standards which evaluate its achievements in clean water access and aquatic ecosystem protection and determine its business value and its regulatory standards and assessment of its associated dangers. The initiative exists as part of a sustainable system that follows defined principles according to project requirements which define its operation.

Union Quality Plastics Limited implemented a CSR initiative that displays complete dedication to environmental protection and social responsibility and economic development. The project design establishes a comprehensive approach to these areas by creating a system which prevents plastic waste from reaching Amber Lake through its stormwater drainage points. The initiative divides sustainability into two separate paths which direct its efforts towards solving the core issue instead of using remedial techniques to deal with environmental issues which already exist.

10.2 Sustainability & SDG Alignment

10.2.1 Environmental Sustainability

The environmental importance of this project depends on how plastic waste from multiple stormwater drain inlets pollutes Amber Lake. The drains function as permanent waterways which transport floating plastic waste into the lake resulting in waste buildup and water quality decline and aquatic life disruption.

The installation of floating interception barriers at selected high-impact drain inlets represents a preventive approach that focuses on controlling pollution at the point of entry. This method is more effective than periodic clean-up activities because it continuously prevents waste from entering the system instead of dealing with waste after it has built up.

The project uses recycled High-Density Polyethylene (HDPE) materials which include plastic waste that the Company creates from its operations. This demonstrates a circular resource utilization method because the organization reuses waste products for environmental restoration projects. The initiative combines waste interception with material reuse which decreases environmental impact while preserving the lake ecosystem for future generations.

10.2.2 Social Sustainability

The initiative works to enhance environmental conditions which benefit communities that live near Amber Lake and especially in Pragathi Nagar and Kukatpally. The existence of plastic waste in water bodies creates unsanitary conditions which lead to bad odors and enable mosquito reproduction while these factors harm the daily life of people who live nearby.

The project maintains cleaner environments through its work to stop plastic waste from reaching the lake which results in better environmental results. The local community experiences improved living conditions through this initiative.

The project includes two main parts which consist of physical work and educational programs that teach people how to dispose of their waste responsibly. The project needs this element because infrastructure projects alone cannot achieve long-term sustainable development. The community needs to change its behavior in order to stop waste from entering drainage systems. The initiative develops sustainable results through its work to manage waste sources and all related waste management practices.

10.2.3 Economic Sustainability

The project is cost effective since it utilizes costs incurred by the preventive strategy of the CSR funds to carry out its operational activities. The Company chose its waste elimination practice at entry points since this would prevent future expenses that would be caused due to the disposal of waste and environmental cleanup measures.

Project team employs special drain inlets in order to obtain the best outcomes of each budget resource. This approach is an advantage to the project in that it does not result in unnecessary expenditure but increases productivity within the whole process.

Recycled HDPE is also used, and this would also save the project some costs since it reduces the number of new materials that would be required and also encourages the practice of sustainable initiatives. The project is to be planned accurately to attain both financial efficiency and environmental responsibility. The initiative thus indicates a balanced strategy whereby limited resources are employed to generate the long term and measurable outcomes.

10.2.4 SDG Alignment

As can be observed, the CSR initiative is based on activities and linked to specific Sustainable Development Goals, specifically, water quality and aquatic ecosystem protection. This identification is not associated with some general or broad association but is concerned with the design and results of the project.

The project underlines **SDG 6 (Clean Water and Sanitation)** as it addresses the issue of plastic waste dumping into the freshwater systems through stormwater drains. In the case of Amber Lake, these drains are streams of water played at a constant place where plastic wastes are swept into the body of water. The project eradicates waste prior to entering the lake because within the choice high-impact inlets interception barriers are installed. This prevents contamination and in the long run ensures that the quality of water is maintained. This is unlike the clean-up activities, which lessen the impacts of pollution when they accumulate, yet this kind of strategy averts the accumulation of wastes.

SDG 14 (Life Below Water) would also be supported by the project as it would reduce the impact of plastic waste on water ecosystems. The pollution caused by plastics can interfere with the habitats and affect the ecological balance of the water body and cause harm to aquatic organisms. By intercepting the garbage before it reaches the lake, the initiative reduces the impact of the toxic pollutant on the aquatic organisms. This helps in saving the ecosystem and keeping the ecology stable.

The benefit of such alignment is that it is specific. The project does not associate to identify itself in general terms with numerous objectives but illustrates a reflection of a local contribution to specific objectives basing on actual operations. This sustains relevance of the alignment and makes it explicit with regards to the outcomes of the initiative.

10.3 Strategic Necessity of Sustainability

In the case of Union Quality Plastics Limited, sustainability is directly associated with the type of operations that it conducts. Being a company operating in the plastic manufacturing industry, it operates in a sector which is closely related to the environmental issues which relate to plastic waste production and management. It is therefore necessary that the Company plays an active role in managing the environmental impact as related to the business operation instead of regarding sustainability as a peripheral or incidental operation.

Regulatory pressure is one of the major motivations in sustainability initiatives. The environmental laws concerning plastic waste management are getting tougher and the concern about accountability, disposal and minimization of environmental effects is getting more and more relevant. In this regard, the introduction of CSR initiative on prevention of leakages of plastic in the water bodies is an act of proactivity. Rather than reacting to the regulatory requirements once they are enforced, the Company is undertaking proactive initiatives to address the possible environmental risks and this assists in ensuring adherence and mitigating subsequent regulatory issues.

Stakeholder expectations are also significant parameters in determining such initiatives. Societies that live around the region of operations, the regulatory bodies, and the environmental bodies would want the companies to provide responsibility on the environmental impacts of

their operations. In Amber Lake as is the case, the inflow of plastic wastes caused by stormwater drains has a direct impact to the immediate environments. With the introduction of a specific intervention at such entry points, the Company will be responding to an apparent and pertinent problem, which would also be useful in establishing trust and a positive relationship with stakeholders.

In business terms, sustainability is significant in long term stability. Organisations that proactively address environmental issues will be at a greater advantage of keeping with the changing regulations to prevent reputational risks as well as remain credible in the market. Such problems may cause more scrutiny and loss of stakeholders confidence. Conversely, responsibility taken by organized programs enhances the Company in the long-run.

The project is further designed to be pilot based which also contributes to the strategic value of the project. Through the intervention of the Company on the specific drain inlets, the Company can monitor the actual performance and determine the operational difficulties of the object (maintenance needs and enhance the method) prior to scaling. This lessens danger and makes certain that going forward the growth is done on the basis of experience and not presumptions. Consequently, sustainability is not discussed as a single performance but a strategized and continuously developing process in the organisation.

10.4 Regulatory and Guideline Compliance

Union Quality Plastics Limited has created its Plastic Leakage Prevention and Recycling Initiative to meet both Indian statutory CSR requirements and established sustainability standards. The project needs to fulfill these frameworks because they serve as legal requirements and help maintain its credibility and transparent operations while following responsible corporate standards. The Company demonstrates compliance with project requirements through its implementation of necessary requirements into its design process.

10.4.1 Compliance with Companies Act, 2013 and CSR Rules

The CSR initiative has been done in line with Section 135 of the Companies Act, 2013, which mandates the relevant companies to devote no less than 2 percent of their average net earnings

to CSR initiatives. The Company has set aside some ₹115,000 to the implementation of the project based on its financial calculations. This is in line with the law and proper utilization of CSR funds.

The initiative is in the Schedule VII of Companies Act, 2013, in the areas that are concerned with the environmental sustainability, ecological balance and preservation of natural resources. The direct correlation of the strategies to plastic waste interception, recycling and prevention of water pollution with these categories.

The implementation is also in agreement with the Companies (CSR Policy) Rules, 2014. The Company has implemented the project by using an eligible implementing agency that is registered under section 12A and Section 80G of the income tax act, and has a valid CSR-1 registration. It has a set operational execution, monitoring and reporting framework, which ensures that the operations are executed in an organized and responsible way. This makes CSR expenditure auditable as well.

10.4.2 Alignment with CSR Governance and Accountability Requirements

The initiative depends on internal governance systems which give the CSR Committee authority to approve projects and distribute funding and oversee project development. The Company's CSR Policy and objectives require activities to maintain their course of development. The project establishes performance assessment systems through its waste interception measurement and beneficiary coverage metrics. The partnership execution establishes responsibility through financial tracking and scheduled reports and actual outcome verification. The initiative's credibility gets strengthened through these measures which also provide transparent information.

10.4.3 Compliance with Environmental and Waste Management Regulations

The initiative operates according to environmental regulations which govern plastic waste management practices. The Plastic Waste Management Rules objectives are supported through the initiative which aims to decrease plastic waste that reaches nature while increasing recycling efforts and establishing responsible waste management practices. The project

achieves its goals through two specific actions which include blocking plastic waste from reaching Amber Lake and implementing correct recycling methods. The construction of barriers with recycled High-Density Polyethylene (HDPE) materials promotes sustainable material practices while meeting all regulatory requirements.

10.4.4 Alignment with International CSR and Sustainability Frameworks

The initiative meets international CSR standards while maintaining national compliance requirements. The organization demonstrates sustainable environmental practices through its pollution control measures and its efforts to minimize operational environmental effects.

The project creates environmental sustainability through physical intervention and educational programs which promote community engagement. The organization practices sustainability through its source waste management approach which matches international sustainability standards.

10.4.5 Practical Application of Compliance in the Project

The initiative's main strength exists because its project design requires practical implementation of compliance standards. The CSR budget has been allocated in line with statutory requirements, and implementation is carried out through a compliant agency.

The environmental objectives of the project establish direct connections to Schedule VII activities which include specific outcome measurements for waste interception and beneficiary coverage that will be used in monitoring and reporting. The use of recycled materials shows our organization follows sustainable practices. The implementation process requires compliance to be built into the system instead of existing as an independent obligation.

10.4.6 Overall Compliance Assessment

Overall, the CSR initiative demonstrates compliance with CSR regulations under the Companies Act, 2013, environmental rules related to plastic waste management and recognised

sustainability practices. This strengthens the credibility of the initiative and ensures that it meets both legal requirements and broader expectations of responsible corporate behaviour.

10.5 CSR Trade-offs Identification

10.5.1 Budget Allocation vs Coverage of Intervention

A key trade-off in the initiative arises from the limitation of CSR funds in relation to the scale of the problem. Amber Lake receives plastic waste through multiple stormwater drain inlets because the Company has only built interception barriers at selected high-impact points. The organization decides to dedicate its resources toward specific needs instead of implementing a complete program.

The project scope decreases because of this restriction, but it guarantees that funding targets sites which receive the highest plastic waste. The intervention creates measurable results because it operates at essential entry points, even though other inflow areas remain unaddressed. The trade-off therefore lies between wider coverage with lower effectiveness and targeted intervention with higher impact.

10.5.2 Preventive Approach vs Visible Short-term Outcomes

The initiative is designed as a protective program which intercepts plastic waste before it reaches Amber Lake. The method effectively decreases ongoing waste introduction while providing stronger pollution control, which becomes more effective throughout the years.

The waste already present in the lake requires immediate attention, which the facility cannot provide. The lake will show no visible improvement until the upcoming period has passed. Local stakeholders often associate project success with visible cleanliness, whereas the actual impact lies in reducing future accumulation. The actual environmental advantages become separated from the public understanding about environmental benefits.

10.5.3 Pilot Implementation vs Scale of Impact

The project has been implemented as a pilot at selected drain inlets, allowing the Company to assess performance under real conditions. This includes understanding operational aspects such as barrier maintenance, waste collection and system efficiency.

While this approach helps reduce implementation risk and allows for improvement before expansion, it limits the scale of impact in the short term. The entire lake system is not covered, and the benefits remain limited to specific locations. The trade-off therefore lies between controlled implementation with learning and immediate large-scale coverage.

10.5.4 CSR Investment vs Competitive Positioning

The allocation of financial resources for CSR activities creates a trade-off because it prevents their use for immediate business purposes. The plastics manufacturing company can spend its available funds either on marketing activities or pricing strategies or production expansion efforts.

Companies that choose not to spend money on CSR initiatives can achieve temporary benefits through improved customer access and market visibility. The Company chose its business strategy because it wanted to achieve outcomes that establish credibility and build stakeholder trust through its environmental compliance efforts. The organization needs to find the appropriate balance between immediate competitive advantages and its future marketplace presence.

10.5.5 Managing and Addressing Trade-offs

While the CSR initiative involves multiple trade-offs, their effective management is necessary to ensure that the project remains practical and aligned with its objectives. The Company manages these trade-offs through targeted intervention and controlled implementation with regular monitoring instead of trying to remove all limitations.

The trade-off between budget and coverage is addressed by prioritising high-impact stormwater drain inlets where plastic inflow is highest. The available CSR funds are used effectively to create measurable results because the entire lake area is not included in the project scope. The

organization controls the time gap between preventive action and visible results through its clear methodology which defines both its processes and expected results. The Company uses measurable indicators of waste interception as its main measurement method because the intervention works to stop waste from entering the lake.

The pilot approach creates a scale limitation that the Company addresses through its first phase which evaluates performance while it discovers maintenance and waste management challenges. The Company can improve its model through this process before implementation in new sites.

The organization handles the trade-off between CSR expenditure and market pressure through its emphasis on sustainable advantages that establish credibility and build stakeholder trust while meeting ecological standards. The Company uses its structured management system to handle trade-offs by establishing resource limits and operational capabilities and evaluating environmental effects, which enables the initiative to maintain its operational effectiveness while expanding its reach.

10.6 Recommendations

The Plastic Leakage Prevention & Recycling Initiative evaluation results in two recommendations that enhance project effectiveness while improving its ability to expand and maintain operations over time.

10.6.1 Gradual Expansion Based on Pilot Performance

The Company should expand the initiative to additional stormwater drain inlets around Amber Lake after assessing the performance of the current pilot locations. A phased approach should be used instead of immediate large-scale expansion because it will enable the team to learn about barrier performance and waste flow patterns and maintenance needs. The process will become more efficient while implementing this solution because it will decrease the chances of the program being implemented without success.

10.6.2 Strengthening Maintenance and Accountability Mechanism

The effectiveness of the interception barriers depends on regular cleaning and maintenance. The Company should establish a clear maintenance schedule with the implementing partner, including defined responsibilities, frequency of checks and reporting requirements. The system will maintain steady performance through basic tracking which will include records of all inspections conducted at regular intervals.

10.6.3 Enhancing Community Awareness and Local Participation

The current initiative targets interception but its permanent results will be determined by waste reduction efforts which create prevention methods. The Company should establish better educational programs throughout Pragathi Nagar & Kukatpally and their adjacent areas. The project will become more effective through basic activities which include local engagement drives and drain signage creation and community participation programs.

10.6.4 Improving Visibility and Communication of Impact

The project adopts a preventive approach which makes its effects difficult to observe at all times. The Company should communicate outcomes through basic reports that include waste collection updates and condition improvement details. The process will establish stakeholder expectations while protecting against misjudgement and miscalculation of project success.

10.6.5 Strengthening Integration with Internal Operations

The Company must keep and increase the utilization of internally produced plastic waste in the manufacture of barriers. This will boost the circular approach and show greater alignment of operations and CSR activities. This may over time be a normal practice within an organization, as opposed to a project.

10.6.6 Exploring Partnerships for Scale and Long-term Sustainability

The Company should establish partnerships with local authorities and municipal bodies and other organisations to expand the initiative's outreach. The project requires collaboration to

extend its boundaries beyond specific inlets and to maintain operations after the first CSR phase ends.

10.7 Reputational Risk Evaluation

The introduction of the CSR initiative also creates some risks to the image, which must be managed and prevented on a regular basis. Such risks are not related to failure but to the transparency of the initiative and the anticipations that it generates in the stakeholders.

One of the risks is associated with the expectations of the stakeholders. The moment the Company initiates a visible intervention in the environment in a place like Amber Lake, it builds a perception of stability and growth. The stakeholders might anticipate that the initiative would be replicated to other drain drainage or maintained in the long run. In the cases where the project is not expanded to a pilot or is not sustained after the first phase, there is a tendency to develop the impression of less commitment, which would impact the credibility even when the current intervention is working.

The other important risk is associated with the effectiveness of implementation. The efficiency of the initiative will be determined by the regular operation and cleaning of the plastic interception barriers. Should the system fail to capture the wastes or not demonstrate any improvement to the lake conditions, it is likely to develop criticism among the neighboring communities and authorities. As the volume of plastic waste that the project is predicted to capture in one year is known, any discrepancy between the anticipated and actual values can have a direct impact on the perception of the stakeholders.

It is also in danger of perceived greenwashing, especially because of the position of the Company in the field of plastics manufacturing. Ecological activities of such sectors are also subject to thorough scrutiny, and stakeholders usually wonder whether the initiative is aware of the actual responsibility or is merely aimed at enhancing image. Lack of clear and consistent reporting of outcomes can be seen as an attempt to make the initiative symbolic, rather than effective.

The risks in question can be addressed using structured supervision, communication and transparent reporting. Frequent performance monitoring, proper reporting of outcomes and clearly observable change of effects can keep the stakeholders confident. The Company can reduce the reputational risk by making sure that the initiative can provide quantifiable results and does not lose track of its goals.

11. CONCLUSION

The Plastic Leakage Prevention and Recycling Initiative is a properly designed and well strategized CSR Intervention that Union Quality Plastics Limited has taken. The project helps to solve a very specific environmental issue, namely, the plastic leak into the urban water systems, without contradicting the principles of sustainability, the regulatory requirements, and stakeholder interests.

The success of the project is in its proactive strategy, in which the key is to prevent the pollution instead of conducting the clean-up procedures every time. This and the recycled materials and well laid out implementation framework shows that it is a practical and responsible attitude towards CSR that is efficient and impact-oriented.

All in all, the project illustrates how sustainability can be effectively implemented in business operations especially in those businesses sectors that have high environmental impacts. The Company can improve its credibility by matching the operations responsibility with the general social and environmental goals strengthening the trust of the stakeholders and contributing to the long-term sustainable development.
